

Network Critical
The Window to your Network™

INVIKTUS

SOLUTION SHEET

Network Critical recognises that network and security managers have a difficult job to secure their network from outside threats. However, it is well documented that errors made with security policies can be a major factor in security breaches. Therefore, cybersecurity solutions like INVIKTUS™ must be implemented to protect the network from human error.

INVIKTUS™ In Action:

As INVIKTUS™ analyses all traffic, it abides to your company policies, ignoring any unwarned policy updates and ensuring no room for error. During analysis, any traffic that INVIKTUS™ recognizes as 'not required' is dropped and dismissed.

INVIKTUS™ reads the traffic and decides what to do with it. The traffic is assessed and if this traffic meets the criteria set by the network team, it is able to access data that is being secured by INVIKTUS™.

If traffic does not meet your outlined

Enhancing cybersecurity by being completely invisible and unhackable, Network Critical's INVIKTUS™ provides an extra layer of 'lock and leave' security to your network.

requirements, INVIKTUS™ drops the traffic instead of giving it access. This extra layer of security in your network is therefore a reliable and high-quality way to keep your mind at ease with the knowledge that your network is ultimately secure.

This additional internal security layer has been designed from the ground up with the security and network managers in mind. Network Critical knows that users of this device need a low-cost, easy-to-deploy and highly reliable device in order to secure the network and stay within budget.

The 1RU device provides lock and leave functionality. This means upon configuration, INVIKTUS™ works in the background with minimal maintenance requirements. It has been created to be completely invisible from the network too, so exterior threats that gain access to your network cannot detect your extra security layers.

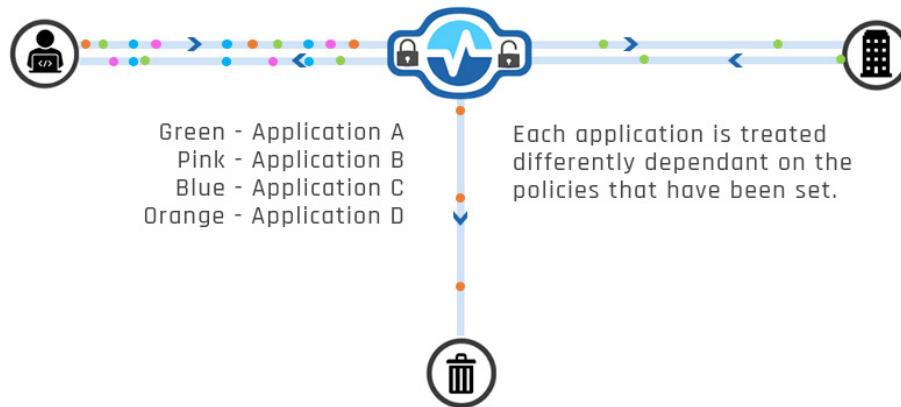

INVIKTUS™ has been designed to operate continuously, supporting full line rate traffic flows, with near-zero latency, at speeds up to 400Gbps per channel. This results in zero impact on network performance.

INVIKTUS

Invisible • Unhackable • Always Protected

KEY FEATURES	BENEFITS
Unhackable	Strengthens any network's security
Modular functionality	Scalable from 2 to 27 devices at up to 400Gb
Dual power supplies	Robust carrier grade chassis
Full Line rate performance	Zero latency
Extra layer of security	Significantly tightens the security policy
Completely invisible	No IP or MAC address
Lock and leave functionality	Runs in the background with minimal maintenance
Customisable policy-based filtering	Negates human error
Low entry cost	Suits any budget
1RU Device	Small space required to implement
